

Flow 3 - Executive Supply Chain Daily Report

Steps

Scheduled trigger

1  Daily at 8:15 AM IST

2  Get All Shipments

3  Get All Incidents

4  Get All Suppliers

5  Compute KPIs & Risk Signals

6  Generate Executive Report

Trigger

Trigger

Start run on a schedule

Schedule

First instance

Jun 29, 2026

at

8:15 AM IST

Repeats

Custom (Daily at 8:15 AM IST)

Repeat every

1

d...

Trigger a run

On this date

Start the workflow early if you'd like to run any steps before the scheduled date.

Step 2

Get All Shipments

Get All Shipments

Sheet *

shipments

Rows to return *

A list of all matching rows

Identify the rows

Define the fields that identify the rows in Google Sheets.

[+ Add filter](#)

Behavior

Decide what Relay.app should do if

No rows are found *

Continue without a result

Sort order

[+ Add field](#)

Step 3

Get All Incidents

Get All Incidents

Sheet *

incidents

Rows to return *

A list of all matching rows

Identify the rows

Define the fields that identify the rows in Google Sheets.

[+ Add filter](#)

Behavior

Decide what Relay.app should do if

No rows are found *

Continue without a result

Sort order

Add field

Step 4

Get All Suppliers

Get All Suppliers

Sheet *

suppliers

Rows to return *

A list of all matching rows

Identify the rows

Define the fields that identify the rows in Google Sheets.

[+ Add filter](#)

Behavior

Decide what Relay.app should do if

No rows are found *

Continue without a result

Sort order

[+ Add field](#)

Step 5

Compute KPIs & Risk Signals

Compute KPIs & Risk Signals

Write custom JavaScript code to analyze or manipulate data from the workflow in any way. Data returned by the code and configured as output can be used in later steps. [Learn more](#)

Inputs

Define the inputs that can be used in the code

{ } shipments: 2 Rows

{ } incidents: 3 Rows

{ } suppliers: 4 Rows

+ Add input

Outputs

Define what values the code should return

= date

total_shipments

delivered_shipments

Step 6

Generate Executive Report

Generate Executive Report

Prompt

Give the model detailed instructions. Insert relevant data for context.

[See examples](#)

You are a supply chain executive assistant.

Generate a daily executive report based on the following data:

Date: 5 = Date

KPIs:

- Total shipments: 5 = Total Shipments

- Delivered: 5 = Delivered Shipments

- Delayed: 5 = Delayed Shipments

- Active incidents: 5 = Active Incidents

- On-time delivery rate: 5 = On-Time Rate (%) %
